Antisense sequences may be used to drown regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies of the according to preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of the protein of the component of the component of the protein of the component of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes a Chlamydia antigen of the invention, designated CPN10635. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       망
This DNA sequence codes for the novel 97.2 kDa surface exposed protein Omp5 (see AAW88418) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The cantibody was used to identify the genes (see AAX06816-27) encoding Omp4-Omp15 proteins (see AAW88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2-gene clusters: Omp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100,3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by pCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100865
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100805

Claim 2: Page 128-320; 320pp; English.

proteins; (6) a
weight % of P1;
peptide of (6). pneumoniae protein (P1), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, hybridization-based assays or amplification-based assays. The protein may be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of N1; (2) an isolated nucleic acid (N2) that hybridizes under stringent conditions to N1; (3) an expression cassette comprising N1 under the transcriptional regulation of a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional in an expression host, and cassette into the host cell, and the cellular progeny of the host cell; (5) a method for producing a Pl comprising growing a cell of (4) where the protein is expressed and isolating the protein free of other proteins; (6) a purified polypeptide composition comprising at least 50 weight % of Pl; and (7) a monoclonal antibody binding specifically to the second control of the protein second contr transcriptional termination region; (4) a cell comprising an expression cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell as a result of induction of the expression This invention describes a novel nucleic acid (N1) encoding a Chlamydia
